HTML Exercise 2 - Links (4 points) – Deadline (Feb 17, 2019)

Create 4 html pages. These should be:

- index.html (About me)
- education.html (Education)
- work.html (Work Experience)
- hobbies.html (Things I like)

Write few things in each page and create appropriate headings for each page. For example, in the index.html page you will have a heading **About me**. Write also few things about yourself. All pages should have **h1** headings and menu links to the rest of the pages. The following diagram explains the structure: Hint: Look at your notes where it talks about links….

Submission: Submit all pages to electron similarly you have done previously in Week 1 when you have transferred your index.html file. During the transfer of files from your computer to electron you might be asked to overwrite index.html, you agree. This means that you will be deleting the previous page (index.html) from electron.

When you transfer the files to electron, go to your URL e.g. http://electron.cs.uwindsor.ca/~yourUwindsorID and check all pages and navigation to make sure they work properly. If everything is ok, then you **must submit this URL to Blackboard**.

Exercise 2 html Navigation Structure – Ability to navigate from a page to any other page

See next page for sample design solution

About me

Welcome to my page! Visit the rest of my pages from the menu below:

Education Work Experience My Hobbies

Education

This page will show all information about my education
